****The Layers Palette**** The Layers palette (Figure 7-4) has 20 `_layers_` (a term that I used in chapter 1) and 5 `_group layers_`. It also shows the current layer color mode and the current brush color. You can adjust the opacity for each layer, or group layer (each of which might have its own opacity setting).

****Figure 7-4**** The Layers palette is an important tool in image editing. To open the Layers palette, hold down the Alt/Option key and click the Layers palette icon (it looks like three stacked squares; Figure 7-5) on the right side of your image.

****Figure 7-5**** The default Layers palette The Layers palette is one of the most important tools in Photoshop. When you first open an image, you will see a thumbnail for that image (Figure 7-6). Click that thumbnail and the image opens in the `_Layers_` section of your workspace. It also opens the Layers palette. ****Figure 7-6**** Clicking the thumbnail opens the image in the Layers palette. To learn

about the Layers palette and how to use the tools available in the various panes, it is critical that you understand Layers.

Q: Retrieving authenticated user data from Google Cloud SQL database I'm trying to access a Google Cloud SQL database that has an `auth_user` column to store the user identifier. I'm trying to retrieve the authenticated user data for a domain in Cloud SQL database. But this doesn't seem to work. It returns

an error message: Error [ERR_INVALID_AUTHORIZATION] It seems that the database is not granting permission to access the column. Is it possible to access the auth_user column using the db.get() method? Or should I create a new column using the Cloud SQL admin console and store user data there? A: Cloud SQL does not use the auth_user column for authentication. This field is used only to identify different rows in the table. Cloud SQL uses the IAM service account of the IAM user who created the database to authenticate and update the database. This field is used for temporary user credentials. More about Cloud SQL security A: This is the correct procedure in 2019 for retrieving the database properties: db.getProperties() If you need to update auth_user you must use sql.update() More info about updating Cloud SQL table Let the games begin!
