At the same time, you can also see a network status notification icon in the notification bar. No more search, find the website link. The whole installation process took about five minutes. What is the [Analysis of nutrition in the elderly in the Prague region]. Between 2002 and 2003 the nutritional status of 4849 subjects from the Prague 5 district (70.9% of the total number of the elderly inhabitants) was assessed. The value of the BIA (Body Impedance Analysis) was used to determine the body composition of the subjects. A percentage of 8.4% was below 50% of the expected body weight, most frequent was a body weight under 40 Kg (40.3%). The percentage of males is higher than that of females, moreover significantly higher in younger subjects. Among elder people the lowest percentage is that of women over 85, i.e. 4.2% and among men of over 75 years, 13.3%. The percentage of subjects with a BIA-verified body mass index (BMI) under 18.5 is higher among men and in higher age groups. People living in an urban environment live longer as people living in villages. The percentage of elder people (65+) living in an urban environment with a BMI under
