Registered, Registered User; Autocad LT 2009 64-bit 4.3.7.1 x64.1.,Q: How to position multiple active/selected elements on separate rows? I'm building an application with multiple filters for filtering a large list of items. The configuration has an input for time and a button to either create a filtered list or jump to the next/previous filter. Time is expressed like 00:05:00. The duration of a filter is normally 10s, so the user can decide whether he wants a filte on 10s or a filte on 1min. This creates one activity/fragment per filter, and the user can choose to create a filtered list or jump to the next/previous filter I was wondering what would be the best way to display the filters. I would like the filters to appear as following: | ----- ----- ----- -----
----- | Filter | Filter | Filter | Filter | Filter | 00:00:00 | 00:10:00 | 00:30:00 | 00:50:00 |
01:00:00 | --- | --- | --- | --- | ---
